The Sun and Space Weather (Astrophysics and Space Science Library) A. Hanslmeier

What are the terrestrial effects of solar activity and the solar activity cycle? The modern term used for solar terrestrial relations is 'Space Weather'. This term describes all external effects on the space environment of the Earth and the Earth's atmosphere. The main driver for space weather is our Sun. Explosive events on the Sun that are modulated by the solar activity cycle lead to enhanced particle emission and short wavelength radiation. This affects satellites: for example surface charging and enhanced drag forces on satellites in low Earth orbit can cause satellite crashes etc. Enhanced radiation also poses a problem for astronauts, especially for extravehicular activities. Another source of space weather effects is space debris and micrometeoroids.

Since the Sun is the main source of space weather effects, the first part of the book is devoted to a general introduction to the physics of the Sun. A better understanding of the phenomena underlying solar activity is also important for prediction of solar outbursts and thus for establishing alert systems for space missions and telecommunication systems. The book contains the following topics:

- possible influence of the Sun on the Earth's climate;
- the effects of radiation on humans in space and the expected radiation dose from various solar events;
- disturbances of the Earth's ionosphere and the implications of radio communication at different wavelength ranges;
- possible hazardous asteroids and meteoroids and their detection; and
- space debris and special shielding of spacecraft.

In the cited literature the reader can find more detailed information about the topics.

This book provides an introduction and overview of modern solar-terrestrial physics for students as well as for researchers in the field of astrophysics, solar physics, geophysics, and climate research.

From reader reviews:

Paulette Stoneman:

This The Sun and Space Weather (Astrophysics and Space Science Library) book is simply not ordinary book, you have it then the world is in your hands. The benefit you obtain by reading this book is usually information inside this guide incredible fresh, you will get info which is getting deeper you read a lot of information you will get. That The Sun and Space Weather (Astrophysics and Space Science Library) without we understand teach the one who looking at it become critical in pondering and analyzing. Don't always be worry The Sun and Space Weather (Astrophysics and Space Science Library) can bring whenever you are and not make your case space or bookshelves' become full because you can have it with your lovely laptop even cellphone. This The Sun and Space Weather (Astrophysics and Space Science Library) having excellent arrangement in word and layout, so you will not experience uninterested in reading.

Delores Moretti:

Here thing why this The Sun and Space Weather (Astrophysics and Space Science Library) are different and trustworthy to be yours. First of all reading a book is good nonetheless it depends in the content of computer which is the content is as scrumptious as food or not. The Sun and Space Weather (Astrophysics and Space Science Library) giving you information deeper as different ways, you can find any book out there but there is no guide that similar with The Sun and Space Weather (Astrophysics and Space Science Library). It gives you thrill examining journey, its open up your own personal eyes about the thing in which happened in the world which is probably can be happened around you. You can easily bring everywhere like in park your car, café, or even in your approach home by train. If you are having difficulties in bringing the published book maybe the form of The Sun and Space Weather (Astrophysics and Space Science Library) in e-book can be your alternate.

Robert Harriman:

Reading a reserve tends to be new life style on this era globalization. With examining you can get a lot of information that may give you benefit in your life. Together with book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Lots of author can inspire their particular reader with their story as well as their experience. Not only the storyplot that share in the guides. But also they write about the data about something that you need case in point. How to get the good score toefl, or how to teach children, there are many kinds of book which exist now. The authors on earth always try to improve their talent in writing, they also doing some investigation before they write to their book. One of them is this The Sun and Space Weather (Astrophysics and Space Science Library).

Robert Russell:

You could spend your free time to study this book this publication. This The Sun and Space Weather (Astrophysics and Space Science Library) is simple bringing you can read it in the park your car, in the

beach, train in addition to soon. If you did not possess much space to bring typically the printed book, you can buy the particular e-book. It is make you quicker to read it. You can save typically the book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.
