Penetration and Permeability of Concrete (Rilem Report) H.W.Reinhardt

This book is an investigation into the barrier qualities of concrete. The transport of fluids, in particular organic and contaminating liquids, through concrete can lead to water and soil pollution. This is a world-wide problem on which there is little published material. This state-of-the-art report redresses the balance and sets out current knowledge on all aspects of the problem, testing methods and indicates the need for further research.
