Preference Data for Environmental Valuation: Combining Revealed and Stated Approaches (Routledge Explorations in Environmental Economics)

Preference Data for Environmental Valuation: Combining Revealed and Stated Approaches (Routledge Explorations in Environmental Economics)

The monetary valuation of environmental goods and services has evolved from a fringe field of study in the late 1970s and early 1980s to a primary focus of environmental economists over the past decade. Despite its rapid growth, practitioners of valuation techniques often find themselves defending their practices to both users of the results of applied studies and, perhaps more troubling, to other practitioners.

One of the more heated threads of this internal debate over valuation techniques revolves around the types of data to use in performing a valuation study. In the infant years of the development of valuation techniques, two schools of thought emerged: the revealed preference school and the stated preference school, the latter of which is perhaps most associated with the contingent valuation method. In the midst of this debate an exciting new approach to non-market valuation was developed in the 1990s: a combination and joint estimation of revealed preference and stated preference data.

There are two primary objectives for this book. One objective is to fill a gap in the nonmarket valuation "primer" literature. A number of books have appeared over the past decade that develop the theory and methods of nonmarket valuation but each takes an individual nonmarket valuation method approach. This book considers each of these valuation methods in combination with another method. These relationships can be exploited econometrically to obtain more valid and reliable estimates of willingness-to-pay relative to the individual methods. The second objective is to showcase recent and novel applications of data combination and joint estimation via a set of original, state-of-the-art studies that are contributed by leading researchers in the field. This book will be accessible to economists and consultants working in business or government, as well as an invaluable resource for researchers and students alike.

The Enjoyable blend here cannot be questionable, just like treasuring beautiful island. Techniques you still want to miss this? Find this book in addition to read it from at this point!

Kari Annis:

As a student exactly feel bored for you to reading. If their teacher requested them to go to the library or make summary for some guide, they are complained. Just tiny students that has reading's internal or real their interest. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that studying is not important, boring in addition to can't see colorful images on there. Yeah, it is to become complicated. Book is very important for yourself. As we

know that on this time, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore , this Preference Data for Environmental Valuation: Combining Revealed and Stated Approaches (Routledge Explorations in Environmental Economics) can make you really feel more interested to read.
