Energy Modeling and Computations in the Building Envelope

Alexander V. Dimitrov

Energy Modeling and Computations in the Building Envelope Alexander V. Dimitrov

Energy Modeling and Computations in the Building Envelope instills a deeper understanding of the energy interactions between buildings and the environment, based on the analysis of transfer processes operating in the building envelope components at the microscopic level. The author:

- Proposes a generalized physics model that describes these interactions at the microscopic level via the macroscopic characteristics of the building envelope
- Presents mathematical models that utilize classical analytical tools and can be used to perform quantitative predictions of the consequences of the energy interactions
- Reveals easy-to-apply engineering methods concerning the design and inspection of the building envelope, taking into account the effects of energy on the envelope

Energy Modeling and Computations in the Building Envelope provides comprehensive coverage of this environmentally and economically important topic, from the physics of energy transfer to its numerical estimation. The book is especially useful to those looking to increase building energy efficiency, decrease the consumption of primary energy carriers, and raise the ecological sustainability of construction products.

From reader reviews:

Maryann Goldberg:

The book Energy Modeling and Computations in the Building Envelope gives you the sense of being enjoy for your spare time. You can use to make your capable considerably more increase. Book can for being your best friend when you getting stress or having big problem with the subject. If you can make looking at a book Energy Modeling and Computations in the Building Envelope being your habit, you can get more advantages, like add your capable, increase your knowledge about some or all subjects. You may know everything if you like start and read a book Energy Modeling and Computations in the Building Envelope. Kinds of book are several. It means that, science e-book or encyclopedia or others. So , how do you think about this reserve?

Scott Smith:

The book with title Energy Modeling and Computations in the Building Envelope contains a lot of information that you can find out it. You can get a lot of gain after read this book. This kind of book exist new information the information that exist in this book represented the condition of the world now. That is important to yo7u to learn how the improvement of the world. This specific book will bring you within new era of the glowbal growth. You can read the e-book on the smart phone, so you can read it anywhere you want.

Elbert Lupton:

What is your hobby? Have you heard that question when you got learners? We believe that that concern was given by teacher for their students. Many kinds of hobby, All people has different hobby. And also you know that little person similar to reading or as looking at become their hobby. You have to know that reading is very important along with book as to be the factor. Book is important thing to provide you knowledge, except your own personal teacher or lecturer. You will find good news or update in relation to something by book. Many kinds of books that can you go onto be your object. One of them is Energy Modeling and Computations in the Building Envelope.

Larry Huff:

Reading a e-book make you to get more knowledge from it. You can take knowledge and information from the book. Book is created or printed or outlined from each source that filled update of news. On this modern era like currently, many ways to get information are available for you actually. From media social just like newspaper, magazines, science guide, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Isn't it time to spend your spare time to open your book? Or just looking for the Energy Modeling and Computations in the Building Envelope when you required it?
