## Recent Advances in Parkinsons Disease: Part II: Translational and Clinical Research: 184 (Progress in Brain Research)

This second volume follows on from Part I by reviewing the variety of animal models of PD current available (from drosophila to rodents to non-human primate species) and their specific contributions to PD research. This is followed by comprehensive coverage of functional neuroimaging studies that explore different pathophysiological questions and evaluate treatment outcome in PD patients. Different areas of experimental therapeutics and outstanding challenges to PD treatment are presented in a concluding group of articles.

- Complete overview of hot topics and approaches to current PD research, from molecules, to brain circuits, to clinical and therapeutic applications
- Leading authors review the state-of-the-art in their field of investigation, and provide their views and perspectives for future research
- All chapters include comprehensive background information and are written in a clear form that is also accessible to the non-specialist
