Mathematical Methods for the Magnetohydrodynamics of Liquid Metals (Numerical Mathematics and Scientific Computation) Jean-Frédéric Gerbeau, Claude Le Bris, Tony Lelièvre

This comprehensive text focuses on mathematical and numerical techniques for the simulation of magnetohydrodynamic phenomena, with an emphasis laid on the magnetohydrodynamics of liquid metals, and on a prototypical industrial application. Aimed at research mathematicians, engineers, and physicists, as well as those working in industry, and starting from a good understanding of the physics at play, the approach is a highly mathematical one, based on the rigorous analysis of the equations at hand, and a solid numerical analysis to found the simulations. At each stage of the exposition, examples of numerical simulations are provided, first on academic test cases to illustrate the approach, next on benchmarks well documented in the professional literature, and finally, whenever possible, on real industrial cases.

From reader reviews:

Shawn Croll:

Have you spare time for a day? What do you do when you have more or little spare time? That's why, you can choose the suitable activity with regard to spend your time. Any person spent their spare time to take a wander, shopping, or went to typically the Mall. How about open or even read a book titled Mathematical Methods for the Magnetohydrodynamics of Liquid Metals (Numerical Mathematics and Scientific Computation)? Maybe it is to be best activity for you. You know beside you can spend your time with the favorite's book, you can more intelligent than before. Do you agree with it has the opinion or you have some other opinion?

Eileen Matherly:

This Mathematical Methods for the Magnetohydrodynamics of Liquid Metals (Numerical Mathematics and Scientific Computation) is brand-new way for you who has attention to look for some information given it relief your hunger of knowledge. Getting deeper you into it getting knowledge more you know or perhaps you who still having small amount of digest in reading this Mathematical Methods for the Magnetohydrodynamics of Liquid Metals (Numerical Mathematics and Scientific Computation) can be the light food in your case because the information inside this book is easy to get by simply anyone. These books build itself in the form that is reachable by anyone, yep I mean in the e-book type. People who think that in e-book form make them feel tired even dizzy this book is the answer. So you cannot find any in reading a book especially this one. You can find actually looking for. It should be here for anyone. So , don't miss that! Just read this e-book variety for your better life and knowledge.

Kathleen Knight:

Do you like reading a reserve? Confuse to looking for your chosen book? Or your book ended up being rare? Why so many question for the book? But any people feel that they enjoy with regard to reading. Some people likes looking at, not only science book but novel and Mathematical Methods for the Magnetohydrodynamics of Liquid Metals (Numerical Mathematics and Scientific Computation) as well as others sources were given knowledge for you. After you know how the fantastic a book, you feel need to read more and more. Science guide was created for teacher or students especially. Those textbooks are helping them to bring their knowledge. In some other case, beside science book, any other book likes Mathematical Methods for the Magnetohydrodynamics of Liquid Metals (Numerical Mathematics and Scientific Computation) to make your spare time more colorful. Many types of book like here.

Concepcion Bass:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information from the book. Book is prepared or printed or descriptive from each source that filled update of news. In this

particular modern era like currently, many ways to get information are available for you actually. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, story and comic. You can add your understanding by that book. Ready to spend your spare time to spread out your book? Or just searching for the Mathematical Methods for the Magnetohydrodynamics of Liquid Metals (Numerical Mathematics and Scientific Computation) when you desired it?
