### **Why This Book is Unique**

This book was written because of the shortage of information on a mixed supply planning method approach into an advanced planning implementation or even within an ERP system. When I reviewed my planning implementation projects going back to 1997, I realized that many companies must have had the business requirement to be able to use multiple methods. Furthermore, many companies must have been dissuaded from using multiple methods (at least within a single system), probably as a "bleed-over" from the sales process. While debates on various methods often emphasize one method over another, in actuality, each method has some advantages and some disadvantages. There is no single supply planning method that meets all requirements within a company. This is the first book to explain in detail how to configure and leverage the multiple methods within SAP SNP.
